- High comfort for the life of the shoe.
- REALLY breathable.
- free foot of bad scents and heat.
- Comfort and cushioning.
- Very easy to glued.

Shockicel[®] Transpira

is microcellular new blend copolymer foam. Manufactured in the EEC.

The structure of the open micro cells allows the material to absorb a measure of the moisture generated by the active foot.

Excellent Compression-set Resistance, impact absorption and stability

Long lasting comfort and flexibility

The excellent properties of this material are in strength: tear resistant, elasticity, cushioning impact, non-fatigue rapid recuperation. Rapid evaporation of retained moisture. Unbeatable transpiration. Easy of gluing. our material highly appropriate for all usual applications and high performance in all types of foot wear.

Easy to glue.

You do not need an abraded face for gluing.

This means a great saving in invested capital and space saved in your warehouse.

PERSPIRATION. COOL. DRY FEET. HEAT FREES

The compression and rapid recuperation of the foam in SHOCKICEL TRANSPIRA when walking means that the air circulates freely because of our larger open cell size. See our Web.

Rapid dispersal of retained heat

SHOCKICEL TRANSPIRA evaporates retained heat faster than that of our competitors

Employ not the insoles carried out with our foams. Without socks, for your maximum comfort it is advised the natural fibres socks employment.

The larger open cell size creates a truly breathable structure.

Fungal Resistant

The chemical composition is anti-fungal

Laminated: with micro fibre fabric. Other fabrics are possible, under consult.

You provide us the fabric material and we will laminate. No adhesives used.

IMPORTANT

NO SURCHARGES FOR LAMINATION
